

Laser Scanners CS / CSD

Laser Scanners CS / CSD

The OPTIMESS laser scanners CS and CSD measure the distance based on the phase shift method with highest precision. They offer measurement rates of one million points per second at scan rates up to 100 profiles per second.

The OPTIMESS laser scanners CS and CSD convince through their compactness and light-weight. Nevertheless, they are suited for rough environments and guarantee maximum reliability and durability.

The intelligently controlled screen heater prevents fogging of the protective screens in high humidity, such as when entering a tunnel.

The integrated «Air-knife» (blow-out device) permanently protects the screens from soiling. In contrast to the CS, the OPTIMESS CSD has an additional measurement window towards the bottom, offering application specific scanning of either one or two 60° fields of view.

Features

- one million measurement points per second
- up to 100 profile scans per second
- measurement range up to 15 meters
- insensitive to sunlight
- compact and lightweight
- robust, protection class IP 67
- operating temperature -20 to +50 °C
- blow-out function for clean screens

API

The sensor is connected by a robust UltiMate™ connector from Fischer®, which complies with protection class IP68 even when unplugged. Power supply and data transfer are compactly routed via the same cable. The measurement data are transferred by GigE and can be easily processed with the included SDK.

Options

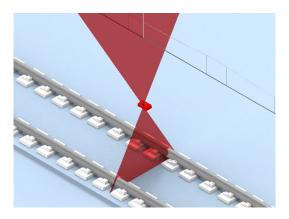

A customized protective housing is offered for additional safety. In addition to the mechanical protection, the internal ventilation allows for an even wider temperature range.

Applications

The OPTIMESS laser scanners CS / CSD can be used wherever a surface is to be measured in two or three dimensions.

They are often used for measuring the contact wire.

The OPTIMESS CS can be operated as a standalone scanner on the train roof. The combination with OPTIMESS 2D sensors (light section) additionally allows the compensation of vehicle movements.

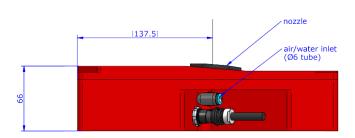

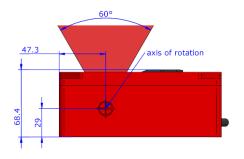

The OPTIMESS CSD, on the other hand, is ideally suited for the simultaneous detection of the contact wire and the rails. This eliminates the need for compensation. A calibration is also not necessary. This makes it ideal for simple, accurate and reliable measurement of contact wire height and lateral position.

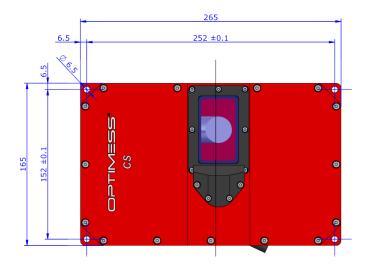

Specifications

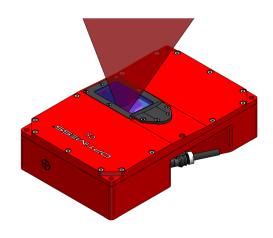

| OPTIMESS | | CS | CSD |
|--------------------------|-------------------------------|----------------------------------|---------|
| Measurement | Field of view | 60° | 2 x 60° |
| | Max. acquisition rate | 1 MHz | |
| | Scan rate | 10 100 Hz | |
| | Measurement range | 0.5 10 m | |
| | Measurement uncer- tainty* | 0.4 mm | |
| | Linearity** | ±4 mm | |
| | Angular resolution | 0.005° | |
| | Angular accuracy | ±0.03° | |
| Environmental conditions | Humidity | 5 95%, non-condensing | |
| | Protection type | IP67 (also when unplugged) | |
| | Ambient light | Dark to sunlight | |
| | Temperature range | -20 50 °C | |
| Laser | Class | 1 | |
| | Wave length | 660 nm | |
| Connections | Supply voltage | 2030 VDC | |
| | Power | < 40 W | |
| | API | Passive PoE, Ethernet 100/BASE-T | |
| Housing | Dimensions | 165 x 265 x 66 mm | |
| | Weight | 5 kg | |

^{* 1} sigma value at 5 m measuring distance, white target (80%), acquisition rate 200 kHz ** In measurement range 0.5 ... 5 m, above ±10 mm

The ELAG Elektronik AG has been developing and supplying measurement systems since 1983 worldwide, setting the highest quality standards.

From laser sensors to complete ready-to-use measurement systems, including sensors, mechanics and user software, everything at ELAG Elektronik AG is developed and manufactured in-house by a powerful, innovative team of engineers. This means that you as our customer can benefit from fully developed sensors and seamlessly assembled measuring systems, for which we can guarantee high-precision results and simple operation.

We consciously seek proximity to you. We are convinced that short communication paths are crucial for us to implement your requirements in consistently high quality.

This also means that we provide you with competent support, from sales consulting and commissioning to the maintenance of your systems.
